EDUCATION

National Institute of Technology, Karnataka
Bachelor of Technology, CGPA: 8.01/ 10.00

2020 – 2024

EXPERIENCE

JP Morgan Chase & Co. — Software Engineering Job Simulation

Apr 2025 – May 2025

- Built and tested microservices for the **MIDAS system** using **Spring Boot**, **Java**, and **Apache Kafka** to process and validate financial transactions in real-time.
- Designed **REST APIs** and implemented **SQL-backed** validation, ensuring scalable, fault-tolerant data recording with high integrity.

Microsoft — Engage Mentee

Apr 2022 – May 2022

- Built a facial recognition system using **Microsoft Azure API** to detect eye fatigue and adjust font size dynamically, aiming to improve on-screen readability. Achieved **90%** accuracy for **100+** surveyed users.

PROJECTS

Secure Cloud-Native CI/CD for Application Delivery

Jan 2025 – Mar 2025

- Developed a full-stack **DevSecOps** pipeline to streamline secure deployment of containerized applications on **Amazon EKS**, using **Terraform** for infrastructure provisioning.
- Automated **CI/CD** with **Jenkins**, building **Docker images** and triggering **ArgoCD-based GitOps** deployments, ensuring seamless delivery from GitHub to production.
- Integrated **SonarQube (SAST)**, **OWASP Dependency Check**, **GitLeaks**, and **Trivy** for proactive security at code, dependency, and container levels. Full-stack observability enabled via **Prometheus and Grafana**.

Online Judge:

Jun 2023 – Aug 2023

- Engineered a real-time online coding platform using the **MERN stack** with **Redux**, enabling live code compilation and feedback; implemented **Docker-based sandboxing** for **100%** code isolation and enhanced platform security.
- Optimized performance with **polling** and **message queues**, scaling to support **10,000+** daily submissions and **500+** concurrent users; deployed on **AWS EC2** with **Nginx** load balancing and horizontal scaling, ensuring **99.9%** uptime and future-ready architecture.

Exam Module 2:

Oct 2023 – Jan 2024

- Led a 4-member team to develop a full-stack web system using **React**, **Node.js**, **Express**, and **SQL**, digitizing the examiner allocation process across all departments and achieving a **95%** reduction in manual workflows.
- Implemented secure **authentication/authorization** and integrated **mailing features** for **500+ Faculty**, ensuring reliable delivery, consistent uptime, and seamless user experience across the system.

TECHNICAL SKILLS

Frontend Development:

HTML5, CSS3, React.js, Redux, , UI/UX Principles

Backend Development:

Spring Boot, Node.js, Express.js, REST Design, JWT, Spring Security, RBAC

Database & Data Flow:

MySQL, MongoDB, Apache Kafka, API Integration, Message Queues.

DevOps & Deployment:

Docker, AWS (EC2, Lightsail), Nginx, Ubuntu, Git, Jenkins, AgroCD, Terraform

Security & Monitoring:

GitLeaks, SonarQube, OWASP check, Trivy, Prometheus, Grafana, RBAC.
